

PROTECTING TOP SECRET INFORMATION & INTELLECTUAL PROPERTY FROM MOBILE DEVICE LEAKS.

A NEW LEVEL OF DETECTION & PROTECTION IS NEEDED TO SECURE GOVERNMENT FACILITIES FROM UNAUTHORIZED MOBILE DEVICES.

Mobile Devices, such as Cell Phones and Smart Phones, are the greatest unrestricted source of information leaks threatening government facilities today.

ZONE PROTECTOR™ FEATURES

- Detects Cell Phones, Smart Phones, Mobile Devices and WiFi.
- Continuous 24-Hr. Monitoring and Protection.
- Can be used as a portable detector with built in rechargeable battery.
- Local and remote alarming with programmable voice alert.
- Scalable solution for larger buildings.
- Detect Devices, track their location, monitor their use and protect your environment.

**Cellbusters
Zone Protector™**

National Security depends on the integrity of the information within the government. Sensitive and Top Secret information are vital to the proper functioning of Government at all levels. The reputation of

security within the Government and Military can be badly tarnished when protected data is leaked.

Today's cellular technology is extremely advanced. It's no longer possible to detect all mobile devices with the older technology in almost all the detectors on the market today. Newer and more advanced technology is needed to give you the proper management of cellular activity in a managed zone. Only the technology developed by **Cellbusters** in the **Zone Protector™** gives you the level of control you need today. Your security depends on having the most accurate information available - and **Cellbusters** products provide it.

Being able to analyze weeks or months of data in easily displayed charts can give you an accurate view of how levels of cellular activity have been fluctuating. If you're implementing a "No Cell Phone Policy," **Cellbusters** products enable you to know how the policy is being adhered to over any length of time. When security audits occur, you can have detailed reports to show how much cellular activity occurred in a specific area. This is the level of management you need to counteract today's threats.

If Cellular Devices need to be detected and tracked in real-time, you can do it using an array of our detectors and our **Zone Manager™** software. In fact, you'll be able to pinpoint the location of the activity and track it on uploaded maps of your facility.

Active Monitoring Technology™ developed by **Cellbusters** gives you active real-time monitoring of all cellular threats 24-Hrs. a day.
